

Factors and Multiples

Factors and Multiples

Find all the factors of 12

$$12 : 1, 2, 3, 4, 6, \underline{12}$$

[finite factors]

Find all the multiples of 6.

$$6 = 6, 12, 18, \dots$$

[Infinite]

Prime and Composite nos.

Prime nos. 2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37, 41, 43

Composite nos. are indicated by brackets above and below the numbers: 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37, 41, 43.

Twin prime nos. Two prime numbers when separated by only one composite no. between them.

eg.

3, 5	29, 31
5, 7	41, 43
11, 13	
17, 19	

Co-primes: Two numbers are said to be co-prime if they do not have a common factor other than 1.

eg.: $\frac{2,3}{3,4}$

Not a co prime
 $\boxed{2,4}$
CF: 1,2

$\boxed{5,6}$
C.F. $\textcircled{1}$
 $\boxed{8,13}$
C.F. = 1
 $\boxed{12,23}$
CF = 1
Coprime

Q. Which of the following nos. are prime numbers:

(i) 179

(ii) 117

(iii) 139

Rule: Divide the no. with 2, 3, 5, 7, 11 and 13
if it is divisible by any of these nos. then the
given no. is not prime else it is prime.

(i) 179
→ It is a prime

(ii) 117
Divisible by 3 hence not a prime

(iii) 139 ⇒ It is a prime.

Prime Factorisation

$\boxed{36} \Rightarrow \underline{1}, \overset{\downarrow}{2}, \overset{\downarrow}{3}, \overset{\downarrow}{4}, \overset{\downarrow}{6}, \dots, 36 \Rightarrow$ All factors of 36

$$\sqrt{4} = \boxed{2} \text{ and } \boxed{-2}$$

$$= \pm 2$$

3. Determine the two numbers nearest to 10000 which are exactly divisible by each of 2, 3, 4, 5, 6 and 7.

$$LCA(2, 3, 4, 5, 6, 7) = \underline{420} \times$$

$$\begin{aligned} \text{first nearest no.} &= 10000 - 340 \\ &= \underline{9660} \end{aligned}$$

$$\begin{aligned} \underline{\text{Second nearest no.}} &= 9660 + 420 \\ &= \underline{10080} \end{aligned}$$

$$\begin{array}{r} 23 \\ \hline \underline{420} \overline{) 10000} \\ \underline{840} \\ 1600 \\ \underline{1260} \\ 340 \\ \underline{0} \end{array}$$

$$\begin{aligned} \underline{\text{Method II}} & \Rightarrow 10000 + (420 - 340) \\ &= \underline{10080} \end{aligned}$$

Properties of HCF and LCM

- HCF of given nos. is not greater than any of the numbers.
- LCM of given nos. is not less than any of the numbers.
- HCF of two ^{or more} co-prime numbers is always 1.
↳ for example 5 and 7 $\boxed{\text{HCF}(5,7) = 1}$
- LCM of two or more co-prime numbers is equals to their product.
eg. 5 and 7 $\boxed{\text{LCM} = 5 \times 7 = 35}$
- HCF of given numbers is always a factor of their LCM.
eg. 14, 21 $\text{HCF}(14,21) = 7$
 $\text{LCM}(14,21) = 42$ $\boxed{7 \text{ is a factor of } 42}$

• ✓ The product of the HCF and the LCM of two numbers is equal to the product of the given numbers.

Say a and b are two numbers

$$\boxed{\text{LCM}(a, b) \times \text{HCF}(a, b) = \underline{a \times b}} \quad \checkmark$$

ex. 14 and 21

$$\text{LCM}(14, 21) = \textcircled{42}$$

$$\text{HCF}(14, 21) = \textcircled{7}$$

$$\underline{\underline{\text{LCM}(14, 21) \times \text{HCF}(14, 21) = 42 \times 7 = \underline{\underline{294}}}}$$

$$\underline{\underline{14 \times 21}} = \underline{\underline{294}}$$

$$\text{LCM} \times \text{HCF} = a \times b$$

$$\text{LCM} = \frac{a \times b}{\text{HCF}}$$

$$\text{HCF} = \frac{a \times b}{\text{LCM}}$$

Q. Find HCF and LCM of 1152 and 1664

$$\text{HCF} = 2^7 = \underline{\underline{128}}$$

$$\text{LCM} = \underline{128 \times 9 \times 13} = \boxed{\text{Method I}}$$
$$= \underline{\underline{14976}}$$

$$64 \left\{ \begin{array}{l} 8 \\ 8 \end{array} \right. \left\{ \begin{array}{l} 2 \mid 1152, 1664 \\ \hline 2 \mid 576, 832 \\ \hline 2 \mid 288, 416 \\ \hline 2 \mid 144, 208 \\ \hline 2 \mid 72, 104 \\ \hline 2 \mid 36, 52 \\ \hline 2 \mid 18, 26 \\ \hline 9, 13 \end{array} \right.$$

Method II :

$$\underline{\text{HCF}} \times \underline{\text{LCM}} = 1152 \times 1664$$

$$\boxed{\text{LCM} = \frac{1152 \times 1664}{\text{HCF}}} = \frac{1152 \times 1664}{128} = \underline{\underline{14976}}$$

2. Given that the HCF of two numbers is 16 and their product is 6400, determine their LCM.

Sol. HCF \times LCM = product of the number.

$$\text{LCM} = \frac{\text{product of the number}}{\text{HCF}}$$

$$\text{LCM} = \frac{6400}{16}$$

$$\boxed{\text{LCM} = 400}$$

Given:

Product of the number = 6400

HCF = 16

3. The HCF and LCM of two numbers are 13 and 1989 respectively.
If one of the numbers is 117, determine the other number.

sl: $\rightarrow \text{LCM} \times \text{HCF} = \text{number 1} \times \text{number 2}$

$$\text{number 1} \times \text{number 2} = \text{LCM} \times \text{HCF}$$

$$\text{number 2} = \frac{\text{LCM} \times \text{HCF}}{\text{number 1}}$$

$$= \frac{13 \times 1989}{117}$$

221
9

$$\frac{1989}{9}$$

$\text{number 2} = \underline{\underline{221}}$

4. Can two number have 14 as their HCF and 204 as their LCM. Give reason in support of your answer.

Sol. Check 14 is factor of 204 or not.
(HCF) (LCM)

If 14 is factor 204 then two numbers can have 14 as HCF and 204 as LCM else not.

\therefore 14 is not a factor of 204,
 \therefore we can't have two numbers that have 14 as HCF and 204 as LCM.

End of the chapter
