Factors and Multiples

Factors

factors of 0 = 1, 2, 3, 4, 5, ..., ∞

$\Rightarrow \boxed{12} = \textcircled{1}, 2, 3, 4, 6, \boxed{12}$

$\boxed{16} = \textcircled{1}, 2, 4, 8, \boxed{16}$

$\boxed{20} = \textcircled{1}, 2, 4, 5, 10, \boxed{20}$

Properties of factor:

- * 1 is factor of every number.
- * Every number (except zero) is a factor of itself.
- * Every number (except zero) has limited number of factors.
- * A factor of non-zero number is less than or equal to the number.
- * Every non-zero number is a factor of zero.

* 1 is the only number having one factor, namely 1 itself.

$$\text{factors of } 1 = 1$$

$$\text{factors of } 2 = 1, 2$$

$$3 = 1, 3$$

$$4 = 1, 2, 4$$

$$25 = 1, 5, 25$$

Multiples

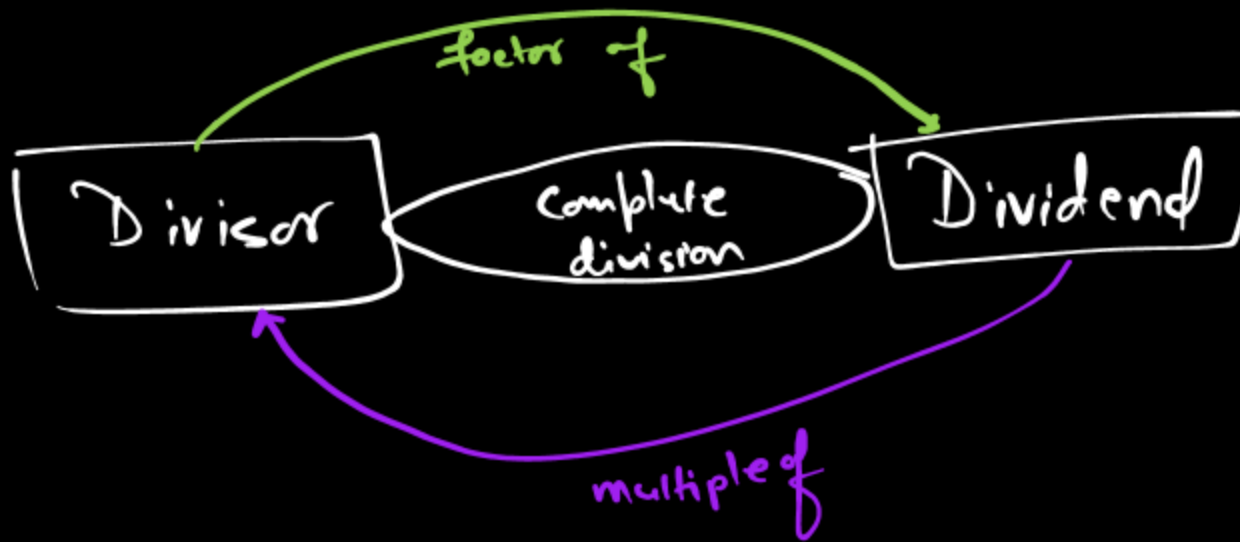

When a number divides another number completely, then dividend is called multiple of divisor. *cmd* the

divisor is called a factor of dividend.

Handwritten division example:

$$\begin{array}{r} 6 \\ 2 \overline{) 12} \\ \underline{-12} \\ 0 \end{array}$$

Labels: Divisor (pointing to 2), Dividend (pointing to 12)

• Factors of 12 : 1, 2, 3, 4, 6, 12

• Multiples of 6 : 6, 12, 18, 24, 30, 36, ...

• Factors of 19 : 1, 19

• Factors of 13 : 1, 13

Properties of multiples :

- * Every number is a multiple of 1.
- * Every number is a multiple of itself.

eg. multiple of 6 is 6, 12...

- * Zero is a multiple of every number.

eg. multiples of 6 : 0, 6, 12, 18, ...

multiples of 8 : 0, 8, 16, 24, ...

- * Every non-zero multiple of a non-zero number is greater than or equal to the number.

- * There are infinite multiples of a non-zero number.

Non-zero numbers are all the numbers except zero.
Example: 1, 2, 3, 4, 5, 6, ... ∞

Even Numbers :

Numbers which are completely divisible by 2.

eg. 0, 2, 4, 6, 8, 10, ...

Odd numbers : Numbers which are not divisible by 2 completely.

eg: 1, 3, 5, 7, 9, 11, ...

Solve:

$$\left(\frac{5}{6} \times \frac{3}{9} \right) + \left(\frac{13}{9} \times \frac{7}{6} \right)$$

$$\left(\frac{5}{18} \right) + \left(\frac{91}{54} \right)$$

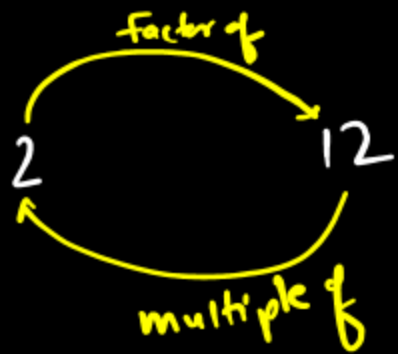

$$\Rightarrow \frac{5}{18} + \frac{91}{54}$$

$$\Rightarrow \frac{15}{54} + \frac{91}{54}$$

$$\Rightarrow \frac{106}{54} = \frac{53}{27} = 1 \frac{26}{27} \checkmark$$

Solve:

$$\frac{7}{16} \div \frac{49}{2}$$

$$\begin{array}{r} \boxed{0} \\ 2 \overline{) 0} \\ \underline{- 0} \\ 0 \end{array}$$

Test of Divisibility.

① Test of divisibility by 2.

A number is divisible by 2, if its unit digit is any one of 0, 2, 4, 6 or 8.

eg: 342 unit place has 2
 $\therefore 342$ is divisible by 2.

① Test of divisibility by 3.

A number is divisible by 3, if the sum of its digits is divisible by 3.

for eg: 16701

Sum of digits = $1+6+7+0+1 = 15$, which is divisible by 3

\therefore 16701 is divisible by 3.

(iii) Test of divisibility by 4

A number is divisible by 4, if the number formed by last two digits is divisible by 4 or the number ends with 00 (zero zero).

eg. $58\ 236$
← last two digit i.e. 36 is divisible by 4
∴ 58236 is also divisible by 4.

6. Test of divisibility by 7.

Step 1: Double the digit at unit place

Step 2: Subtract the doubled value from rest of the number.

↓
the number formed
by digits excluding
unit place

Step 3: if the number so obtained is divisible by 7, then the actual no. is also divisible by 7.

eg. ① 934 is divisible by 7 or not.

Step 1: $4 \times 2 = \underline{\underline{8}}$

Step 2: $\underline{\underline{93}} - 8 = \boxed{85}$

$\therefore 85$ is not divisible by 7.

$\therefore 934$ is not divisible by 7.

$315 = 3 \times 3 \times 5 \times 7$

315 is labeled as **Composite**.

$3 \times 3 \times 5 \times 7$ is labeled as **Product of prime factors**.

Highest Common Factor (H.C.F.) or Greatest Common Divisor (G.C.D.)

HCF (or GCD) of two or more number is the greatest/largest number that divides each of the given numbers completely (No remainder).

Method I: HCF by factorisation method.

eg. Find the HCF of 24 and 32.

Factors of 24: 1, 2, 3, 4, 6, 8, 12, 24 }
Factors of 32: 1, 2, 4, 8, 16, 32

Common factors: 1, 2, 4, 8

HCF (Highest common factor) is 8.

Q. Find the HCF of 18, 24 and 30, using factorisation method.

18: 1, 2, 3, 6, 9, 18

24: 1, 2, 3, 4, 6, 8, 12, 24

30: 1, 2, 3, 5, 6, 10, 15, 30

HCF : 6

Method 2: HCF by Prime factorisation method

eg: Find HCF of 72 and 90

Prime factorisation of 72: $2 \times 2 \times 2 \times 3 \times 3$

Prime factorisation of 90: $2 \times 3 \times 3 \times 5$

H.C.F of 72 and 90 = product of common prime factor.

Method 4: HCF by Division Method (Long Division Method)

⇒ Used for find HCF of large/big numbers.

eg. Find the HCF of 135 and 180, using division method.

Step 1: Divide the larger number by the smaller number.

Step 2: Divide the divisor by the remainder.

Step 3: Repeat the process of dividing the previous divisor by the remainder obtained till 0 is obtained as remainder

⇒ Then, the last divisor is the required HCF.

$$\begin{array}{r} 180 \\ 135 \overline{) 180} \\ \underline{-135} \\ 45 \end{array}$$

$$\begin{array}{r} 135 \\ 45 \overline{) 135} \\ \underline{-135} \\ 0 \end{array}$$

HCF of 135 and 180 is 45.

Q. Find the HCF of 217 and 385, using division method.

Some facts about HCF and LCM.

(i) If HCF of two numbers is $= 1$, then they are coprime.

(ii) LCM of two co-prime numbers is equal to their product.

eg. (2 and 5)

$$\text{HCF} = 1$$

$$\text{LCM} = 2 \times 5 = 10$$

(iii) HCF of two numbers is always smaller than their LCM.

(iv) HCF divides LCM completely.

$$\text{HCF}(3 \text{ and } 9) = 3 \checkmark$$

$$\text{LCM}(3 \text{ and } 9) = 9 \checkmark$$

3 (HCF) divides 9 (LCM) completely.

(v) The product of two given numbers is equal to the product of their HCF and LCM in the next class.

ex. 6 and 9

$$\text{HCF}(6, 9) = \underline{\underline{3}}$$

$$\text{LCM}(6, 9) = 18$$

$$\text{HCF}(6, 9) \times \frac{\text{LCM}(6, 9)}{} = 3 \times 18 = \textcircled{54}$$

Q. Three pieces of timber 42 m, 49 m and 63 m long have to be divided into planks of the same length. What is the greatest possible length of each plank? H.C.F

We need to find the highest/greatest no. that divides 42, 49 and 63 completely.

i.e., HCF of 42, 49 and 63

7	42, 49, 63
	6, 7, 9

HCF = (7)

The required length of each plank = 7m.

Q. Two ropes 12 m and 18 m long are to be cut into small pieces of equal lengths. What will be the maximum (greatest) length of each piece?

[for max. length we find H.C.F.]

Sol: HCF of 12 and 18.

$$\begin{array}{r|l} 2 & 12, 18 \\ \hline 3 & 6, 9 \\ \hline & 2, 3 \end{array}$$

$$\text{HCF} = 2 \times 3 = 6$$

Therefore, the maximum length of each piece = 6 m.

Q. Find the least number of marbles so that the heaps of 12, 15 or 20 marbles can be made.

Sol. We find LCM of 12, 15, 20.

[For least / minimum no. we find LCM]

2	12, 15, 20
2	6, 15, 10
5	3, 15, 5
3	3, 3, 1
	1, 1, 1

$$\text{LCM} = 2 \times 2 \times 3 \times 5 = 60$$

\therefore The least number of marbles = 60.

Q. Find the greatest number which divides 18 and 24 exactly.

Sol: HCF of 18 and 24.

$$\frac{18, 24}{}$$

$$\text{HCF} = 6$$

\therefore The greatest number = 6.

Q. Find the least number which is exactly divisible by 9, 12 and 18.
LCM

Sol. LCM of 9, 12 and 18.

$$\begin{array}{c} | 9, 12, 18 \\ \hline \end{array}$$

$$\text{LCM} = 2 \times 2 \times 3 \times 3 = 36$$

\therefore the least no. = 36.

Q. A shopkeeper sold mathematics books for ₹108 on Monday and for ₹84 on Tuesday. What can be the maximum price of each book?
H.C.F.

Sol: HCF of ₹108 and ₹84

\therefore the max. price of each book = ₹12.

Q. What is the least number of bananas a teacher should have so that, when he distributes equal number of them to his three groups of 10, 15 or 25 students, no banana is left with him?

Sol: LCM of 10, 15, 25.

$$\begin{array}{r|l} 5 & 10, 15, 25 \\ \hline & 2, 3, 5 \end{array}$$

$$\begin{aligned} \text{LCM} &= 2 \times 3 \times 5 \times 5 \\ &= 150 \end{aligned}$$

\therefore The least no. of bananas = 150.
